

RoHS – Customer Information

Reference: **RoHS – Directive**

(Restrictions of Hazardous Substances 2011/65/EU)
(Including Commission Delegated Directive (EU) 2015/863)

Erocarb SA hereby declares that the electrical and electronic components integrated into our machines are sourced from qualified manufacturers and suppliers and are selected based on their declared compliance with the applicable requirements of Directive 2011/65/EU, including Commission Delegated Directive (EU) 2015/863.

Erocarb SA does not manufacture electrical or electronic components itself. Such components are purchased from specialized manufacturers and integrated into our machinery. Relevant RoHS compliance declarations and technical information are obtained from our suppliers where applicable.

Certain electrical components, particularly electrical contact parts, terminals, connectors and other components manufactured from copper alloys such as brass, may contain lead (Pb) as an alloying element. Where applicable, the presence of lead is managed in accordance with the relevant RoHS requirements and applicable exemptions (for lead in copper alloys: exemption No. 6c).

The RoHS status of electrical and electronic components is therefore based on the compliance declarations and technical information provided by the respective manufacturers and suppliers.

This declaration is based on supplier declarations, technical documentation and information available to Erocarb SA at the date of issue.

Best regards
